INTELLIGENCE READINGS

A briefly annotated bibliography on
Intelligence, its history, key figures,
and disciplines.

FOREWORD

Six years after its first edition, this new bibliography on intelligence is a necessary update. An update to keep abreast not only of the new books on the topic, but – and most importantly – of the developments that spurred their authors on to write those books, in the never-ending interplay between reality and its interpretation, lacking which we would be ill prepared to cope with the security challenges of today's complex world.

In an era when history seems to accelerate, threats to national security evolve accordingly: something which is very clear to those responsible of preventing and contrasting those threats and, similarly, to those that, in Italy and elsewhere, research the world of intelligence and security. The present bibliography stands as a proof of the growing, worldwide interest for such a sensitive topic, and it is very good news if it is true – and it is – that libraries are the “granaries of the spirit”. For that, we should

be grateful, first and foremost, to the authors of the books selected here. A noteworthy contribution was also granted – I'd like to stress it without hiding a hint of pride – by the many initiatives intended to promote the culture of security sponsored by the Italian intelligence in the past recent years. Seeds were planted and bore fruits, some of them represented by the books that appear in this bibliography. Its original structure has been willingly maintained unchanged: it remains, therefore, not exhaustive and intrinsically provisional. A living document by definition, it is intended as a tool to feed the virtuous circle connecting awareness and knowledge which guides those working to protect national security. Nowadays more than ever before, considering the unprecedented relevance acquired by new threats, i.e. cyber-threats and economic aggressions, often closely intertwined. A major shift in the threat landscape which nonetheless makes books more important than ever. Among the most remarkable expressions of the physical world, books remain key in order to decode the world around us, starting from the most complex creation of the human mind, cyberspace. First and foremost, to avoid that the "creature" escapes its creator's control.

It is not surprising that most of the books added to the present bibliography deal with the new strategic challenges Italian and foreign intelligence face. But numbers alone are not relevant. What really matters is to sow more seeds, to add value, since information – the most

sought after prize of intelligence activity – is really useful only as far as it leads to a thorough understanding of the dynamics at play. To achieve that, cross-fertilization amongst different sources of knowledge is vital, and so is reading books distilling that knowledge. “Books are for use” states the first of the five laws of library science set out by the great Indian librarian Ranganathan. A principle Umberto Eco further strengthened, making it part of our collective memory: “the good of a book lies in it being read. A book is made up of signs describing other signs which in turn describe physical things. If no eye reads it, the book is a mere receptacle of signs which do not generate concepts; it remains mute”.

Like all similar works, the present bibliography is above all an invitation to read. What makes it different from other bibliographies is the fact that the more it will be browsed and used, the more it will help protect a vital commodity: the security of our Countries.

NOTE

Annotated Table of Contents

The selection criteria used to update and upgrade this bibliography on Intelligence, have to a great extent followed those of the first edition published in 2014. The international breadth of perspective has been further prioritized, with consideration to: the countries where the books have been published; the languages in which they were written (Italian, English, French, Spanish, and German); as well as the wide range of the reading public (academic, specialists, and non specialists).

Updating and upgrading this Bibliography requires a limited revision of these sections of the book:

... in general (3-31 pp.): books dealing with general issues, introducing the world of Intelligence;

Intelligence and Counter... (35-53 pp.): Intelligence and Counterespionage-related books;

Int-pedia (57-63 pp.): encyclopedic works and manuals;

Intelligence Analysis (67-76 pp.): in-depth studies on Intelligence analytical methodologies and their main implications;

Law and Intelligence (79-81 pp.): books on the regulatory aspects and legal framework of the Italian Intelligence System;

A bit of history (85-145 pp.): the most important books on the history of Intelligence from antiquity till the last century;

Key Figures & Players (149-166 pp.): biographies and monographs on particular key figures from the Intelligence world;

Foreign Intelligence Services (169-207 pp.): bibliography on foreign Intelligence Services;

Female Universe (211-216 pp.): books on the role and experience of women in the history and life of Intelligence;

Cyber (219-232 pp.): books on cyberspace and cyber security;

Classics of Espionage (235-240 pp.): selection of the main classics of the genre.

Compared to the 2014 edition, this bibliography has been enriched with a specific section on **cyber**–related issues, an unpublished survey of literary works, as well as a list of the authors at the end of the book.
